

CALCULO DEL TOP CON LA FUNCION DAX *TOPN*

La siguiente medida DAX garantiza el correcto funcionamiento para el calculo del top n productos (medicamentos) con la función TOPN, considerando un slicer Top-Bottom y un parámetro de rango que modifica el valor del número de elementos a calcular. Esto se calcula considerando una sola métrica (Revenue).

Revenue- Top/Bottom Drugs =

```
VAR _Selected_Field = SELECTEDVALUE( 'Slicer Top-Bottom'[Field], "Top" )
```

```
VAR _Selected_Items = SELECTEDVALUE( 'No. Items'[No. Items] )
```

```
VAR _Filtered_Drugs =
```

```
    FILTER(  
        ALL( Drug[Drug Name] ),  
        CALCULATE( [Revenue] ) <> 0  
    )
```

```
VAR _Bottom_Drugs =
```

```
    CALCULATE(  
        [Revenue],  
        KEEPFILTERS(  
            TOPN(  
                _Selected_Items,  
                _Filtered_Drugs,  
                [Revenue],  
                ASC  
            )  
        )  
    )
```

```
VAR _Top_Drugs =
```

```
    CALCULATE(  
        [Revenue],  
        KEEPFILTERS(  
            TOPN(  
                _Selected_Items,  
                _Filtered_Drugs,  
                [Revenue],  
                DESC  
            )  
        )  
    )
```

```
VAR _Result =
```

```
    SWITCH(  
        TRUE(),
```

```

        _Selected_Field = "Bottom", _Bottom_Drugs,
        _Selected_Field = "Top", _Top_Drugs,
        BLANK()
    )

RETURN _Result

```

La siguiente medida toma en consideración un elemento más, el cual es un slicer de métricas, es decir, calcular el Top considerando el calculo dinámico de varias métricas.

Dynamic - Top/Bottom Drugs =

```

VAR _Selected_Field = SELECTEDVALUE( 'Slicer Top-Bottom'[Field], "Top" )
VAR _Selected_Items = SELECTEDVALUE( 'No. Items'[No. Items] )

```

```

VAR _Filtered_Drugs =
    FILTER(
        ALL( Drug[Drug Name] ),
        CALCULATE( [Selected Parameter] ) <> 0
    )

```

```

VAR _Bottom_Drugs =
    CALCULATE(
        [Selected Parameter],
        KEEPFILTERS(
            TOPN(
                _Selected_Items,
                _Filtered_Drugs,
                [Selected Parameter],
                ASC
            )
        )
    )

```

```

VAR _Top_Drugs =
    CALCULATE(
        [Selected Parameter],
        KEEPFILTERS(
            TOPN(
                _Selected_Items,
                _Filtered_Drugs,
                [Selected Parameter],
                DESC
            )
        )
    )

```

```

    )
  )
)

VAR _Result =
  SWITCH(
    TRUE(),
    _Selected_Field = "Bottom", _Bottom_Drugs,
    _Selected_Field = "Top", _Top_Drugs,
    BLANK()
  )

RETURN _Result

```

Donde:

Selected Parameter =

```

VAR _Selected_Parameter = SELECTEDVALUE( 'Metrics Parameter'[Metrics Parameter Order] )

VAR _Result =
  SWITCH(
    TRUE(),
    _Selected_Parameter = 0, [Profit],
    _Selected_Parameter = 1, [Quantity Sold],
    _Selected_Parameter = 2, [Revenue],
    BLANK()
  )

RETURN _Result

```
