

Segmentación De Clientes Con Análisis RFM

En Power BI Usando DAX

1. Tabla Calculada: RFM Table

Descripción:

Tabla que resumen por cliente las métricas *Recency*, *Frequency* y *Monetary*, base del análisis RFM.

```
RFM Table =  
VAR _LastPurchaseDate =  
    CALCULATE(  
        MAX('Online Retail'[InvoiceDate]),  
        REMOVEFILTERS('Online Retail')  
    )  
VAR _RFMTable =  
    ADDCOLUMNS(  
        VALUES('Online Retail'[CustomerID]),  
        "Recency", DATEDIFF(CALCULATE(MAX('Online Retail'[InvoiceDate])), _LastPurchaseDate, DAY),  
        "Frequency", CALCULATE(DISTINCTCOUNT('Online Retail'[InvoiceNo])),  
        "Monetary", CALCULATE(SUM('Online Retail'[Revenue]))  
    )  
RETURN _RFMTable
```

2. Medidas: Percentiles Para Recency

Descripción:

Medias que calculan los percentiles 33% y 66% de la variable *Recency*.

```
Recency 33 Percentile =
VAR _LastPurchaseDate =
    CALCULATE(
        MAX('Online Retail'[InvoiceDate]),
        REMOVEFILTERS('Online Retail')
    )
VAR _RFMTable =
    ADDCOLUMNS(
        VALUES('Online Retail'[CustomerID]),
        "@Recency", DATEDIFF(CALCULATE(MAX('Online Retail'[InvoiceDate])), _LastPurchaseDate, DAY)
    )
RETURN
    PERCENTILEX.INC(_RFMTable, [@Recency], 0.33)

Recency 66 Percentile =
VAR _LastPurchaseDate =
    CALCULATE(
        MAX('Online Retail'[InvoiceDate]),
        REMOVEFILTERS('Online Retail')
    )
VAR _RFMTable =
    ADDCOLUMNS(
        VALUES('Online Retail'[CustomerID]),
        "@Recency", DATEDIFF(CALCULATE(MAX('Online Retail'[InvoiceDate])), _LastPurchaseDate, DAY)
    )
RETURN
    PERCENTILEX.INC(_RFMTable, [@Recency], 0.66)
```

3. Medidas: Percentiles Para Frequency

Descripción:

Percentiles 33% y 66% de la *frecuencia de compra* por cliente.

```
Frequency 33 Percentile =  
VAR _RFMTable =  
    ADDCOLUMNS(  
        VALUES('Online Retail'[CustomerID]),  
        "@Frequency", CALCULATE(DISTINCTCOUNT('Online Retail'[InvoiceNo]))  
    )  
RETURN  
    PERCENTILEX.INC(_RFMTable, [@Frequency], 0.33)  
  
Frequency 66 Percentile =  
VAR _RFMTable =  
    ADDCOLUMNS(  
        VALUES('Online Retail'[CustomerID]),  
        "@Frequency", CALCULATE(DISTINCTCOUNT('Online Retail'[InvoiceNo]))  
    )  
RETURN  
    PERCENTILEX.INC(_RFMTable, [@Frequency], 0.66)
```

4. Medidas: Percentiles Para Monetary

Descripción:

Percentiles 33% y 66% del *gasto total* por cliente.

```
Monetary 33 Percentile =  
VAR _RFMTable =  
    ADDCOLUMNS(  
        VALUES('Online Retail'[CustomerID]),  
        "@Monetary", CALCULATE(SUM('Online Retail'[Revenue]))  
    )  
RETURN  
    PERCENTILEX.INC(_RFMTable, [@Monetary], 0.33)  
  
Monetary 66 Percentile =  
VAR _RFMTable =  
    ADDCOLUMNS(  
        VALUES('Online Retail'[CustomerID]),  
        "@Monetary", CALCULATE(SUM('Online Retail'[Revenue]))  
    )  
RETURN  
    PERCENTILEX.INC(_RFMTable, [@Monetary], 0.66)
```

5. Columnas Calculadas: Scores

Descripción:

Cálculo de *R*, *F* y *M* Scores en la *RFM Table*.

```
R Score =  
SWITCH(  
  TRUE(),  
  'RFM Table'[Recency] <= [Recency 33 Percentile], 3,  
  'RFM Table'[Recency] <= [Recency 66 Percentile], 2,  
  1  
)  
  
F Score =  
SWITCH(  
  TRUE(),  
  'RFM Table'[Frequency] <= [Frequency 33 Percentile], 1,  
  'RFM Table'[Frequency] <= [Frequency 66 Percentile], 2,  
  3  
)  
  
M Score =  
SWITCH(  
  TRUE(),  
  'RFM Table'[Monetary] <= [Monetary 33 Percentile], 1,  
  'RFM Table'[Monetary] <= [Monetary 66 Percentile], 2,  
  3  
)
```

6. Columna Calculada: RFM Score

Descripción:

Genera una cadena de texto con los tres scores para facilitar la segmentación.

```
RFM Score =  
FORMAT([R Score], "0") & FORMAT([F Score], "0") & FORMAT([M Score], "0")
```

7. Columna Calculada: Segmentación De Clientes

Descripción:

Clasifica a cada cliente en un segmento basado en su combinación *RFM*.

```
Segment =  
SWITCH(  
    TRUE(),  
    [R Score] = 3 && [F Score] = 3 && [M Score] = 3, "VIP Customer",  
    [R Score] = 3 && [F Score] >= 2 && [M Score] >= 2, "Loyal Customer",  
    [R Score] = 3, "New Customer",  
    [R Score] = 2 && [F Score] = 3, "Potential Loyallist",  
    [F Score] = 1 && [M Score] = 1, "At Risk",  
    [R Score] = 1, "Lost Customer",  
    "Promising Customer"  
)
```

8. Resultados Del Código DAX

CustomerID	Recency	Frequency	Monetary	R Score	F Score	M Score	RFM Score	Segment
12346	326	1	77183.60	1	1	3	113	Lost Customer
12347	2	7	4310.00	3	3	3	333	VIP Customer
12348	75	4	1797.24	2	2	3	223	Promising Customer
12349	18	1	1757.55	3	1	3	313	New Customer
12350	311	1	334.40	1	1	1	111	At Risk
